OEL8000II Tank Gauging and Leak Detection System:

The OEL8000II is a comprehensive tank-gauging and leak-detection system that can simultaneously monitor product levels, water levels, temperatures and leaks in up to 8 tanks. With advanced technology and enhanced features, the OEL8000II is suitable for a variety of gauging and leak-detection applications. [Click here to learn more and all see all of our OEL8000II equipment!](#)

Leak and Level Detection:

OMNTEC's LU and LPD leak-detection and overflow-alarm systems provide continuous, accurate monitoring in a variety of applications. Typical applications are reservoirs, sumps, dry interstitial spaces and dispenser pans. These easy-to-install controllers alarm for in tank levels and leak conditions. The LU controllers are capable of accepting up to 9 sensors for high level and leak detection. The LPD controllers are capable of accepting up to 9 sensors for in tank levels and product distinguishing leak detection. The electro-optic sensors used with these controllers allow users to easily cycle all sensors through a simulated leak, with the press of a single button. This feature eliminates the need to remove the sensor from its location. [Click here to learn more and see all of our LU and LPD equipment!](#)
