# WANGEN PUMPEN

Our name comes from the company's head office and main production site, which are located in Wangen in the Allgäu region of Germany. This is our home: in the most southerly part of Germany where three countries – Austria, Switzerland and Germany – come together at Lake Constance.

Take a dive into our world and learn more about us on the following pages.

## TRUST

# 35

years:  
That is how long  
our pump ran  
for Mr. Maier  
in Austria without  
any repairs.

Our motivation is the satisfaction of our customers, our passion is the excellence of our standards. All areas of our company are built on this principle. This is the only way to create the kind of lasting values which let us write success stories like that of a pump running without repair for 35 years. For us, quality is a pump which you do not notice. And then when you do notice it after a very, very long time, it is in connection with our – equally excellent – service support.

Quality management at WANGEN PUMPEN is certified to ISO 9001. This – temporary – certificate must be applied for again and again to verify that the high standards are still met. For us this is a matter of course.

## CHALLENGES

# 48

month  
is the average operating period  
of the 10,000 pumps from our  
production.

Facing up to challenges helps you grow – and not only when you are a child! So what must a pump do? Exactly: It has to pump under all conditions, good or bad. And when conditions get bad, that's when pumps from WANGEN PUMPEN really come into their own. Whether you need to handle adhesive, abrasive or crumbly material, or require absolute hygiene: This is when our pumps are at their very best. This is owed among other things to the brain power in our department for particularly tricky development tasks and the solutions it comes up with. For example, the universal joints with universal shaft installed in our progressing cavity pumps. Advantages lie in their extreme load ratings, reliability and long life even when handling difficult and challenging media. The resulting low life cycle costs save the user both cash and stress.

Pumps from WANGEN PUMPEN convey materials with viscosities from 1 to 10,000,000 mPAS at pressures from 0 to 48 bar and rates from 500ml/h to max. 300m<sup>3</sup>/h. Be it with progressing cavity pumps in all imaginable sizes or with screw pumps, be it for standard or individual solutions: We have been meeting these challenges for over 44 years in e.g. the food, environment, biogas, agriculture and chemical sectors. And, if desired or required, some of our models of course can be produced to be certified by 3-A Sanitary Standards Inc..

## GLOBALLY

# 53

countries  
are supplied with products and  
services from WANGEN PUMPEN.

A wide-angle photograph of the Earth from space, showing the curvature of the planet and the blue of the oceans. The landmasses are visible in shades of green and brown.

Manufactured in Germany – used world-wide. Our customers' esteem for and trust in pumps from WANGEN PUMPEN confirm our commitment to quality work as a basis for long-term value creation. Be it prompt delivery, reliable installation or after-sales support: Excellent service is one of the key elements of our customer care activities. In Germany and neighboring countries we guarantee prompt assistance via our 24/7 service hotline when things need to go really quickly. Service in this form is something you will get only from WANGEN PUMPEN, fulfilling our promise to provide the best support to our approximately 10,000 customers in all their needs and processes.

Other countries, other pumps. The flexibility of our teams of specialists in meeting customer wishes while fulfilling country- and application-specific requirements extends from consulting to production, delivery and installation. World-wide and without equal.

## ACROSS BORDERS

# 7000

of our pumps are in biogas plants in Germany alone. This means an average of one pump from WANGEN PUMPEN per biogas plant.

Pumps from WANGEN PUMPEN work smoothly, even when they need to cope with high-friction, viscous, sticky or coarse mixes. Be it for sewage works in Mexico, Italy or China, for biogas plants in France, Canada or India, for industrial works in the Czech Republic, Singapore or Spain, or as food pumps in the USA, Norway or Russia. No matter what, no matter where. As our list of references testifies: We can be relied on to get your materials moving. And always in compliance with country-specific regulations of course.

The next time you are on holidays, maybe this thought will cross your mind: Somewhere nearby there's almost certain to be a pump from WANGEN PUMPEN working unseen to keep things running smoothly.

## VALUES

# 100

percent:

At WANGEN PUMPEN we live up  
to our values 100 percent.

Values are meaningless if you don't live up to them. Many role models receive no more than lip service. We don't need any posters to remind us symbolically of our values. After all: quality awareness, a solutions-orientated approach, social responsibility and respectful interaction will only have an enduring impact if they are practiced out of daily conviction, thus forming a sustainable basis of trust for a working partnership. This attitude is reflected not only in our products but also in our relationships with customers and suppliers.

On this foundation grows an outstanding corporate culture that represents a major part of our very own, special assets. This way we create a motivating environment from which we draw the fuel for our inner drive and the basis for our achievements.

## SUSTAINABILITY

# 2000

cubic meters  
of fresh water is saved by us a year.

As an ISO 14001-certified company, we know that sustainable management is a matter of common sense. Out of responsibility for the future of our environment and following generations, we are investing in the development, introduction, monitoring and continuous improvement of environment management systems. This takes the form of an on-going process, with new goals defined and implemented each year. This way we are helping to stem environmental pollution and promote environmental protection.

Whether we save 2000 m<sup>3</sup> of fresh water by returning it to a cooling circuit or 3 tons of raw rubber through recycling: We take our commitment to sustainability seriously. The view through our windows of the beautiful Allgäu countryside is an impressive reminder of why it is right to honor our environmental responsibility.

GROWTH

200

and more people are  
employed at WANGEN PUMPEN.

Since it was founded in 1969, WANGEN PUMPEN has developed continuously from a handicrafts business to a medium-size company with a workforce of over 200. WANGEN PUMPEN has achieved healthy growth, remaining solid and stable to the core at all times. This is due among other things to a special promise which we continue to keep today as much as back then: To deliver products and services which meet the highest quality requirements and expectations of our customers. Challenges change, however, and we can only meet them proactively – by continuously questioning, examining and optimizing our workflows and structures.

Pumps from WANGEN PUMPEN are highly regarded at regional, national and international level thanks to our consistent orientation to market and customer requirements. It is this high esteem in which we are held by our customers that motivates us to preserve, improve and breathe new life into our values day after day.

## EXPERTISE

# 15

percent  
of the WAGEN PUMPEN  
workforce are trainees.

Our young talents are our future. In 8 training professions we are sowing the seeds for identifying with our quality philosophy, living up to our values, and – ultimately – understanding our customers' needs. We open up interesting prospects while providing freedom, stimulus and opportunities to contribute to WANGEN PUMPEN. As the result we are looked on less as an employer and more as a mentor and partner. To be able to cover all the different facets of our company's activities to the greatest extent possible, we have a very high trainee quota. This way we can ensure that our valuable know-how is passed on to the next generation with first-class results – know-how which makes WANGEN PUMPEN an attractive employer at local level and a successful business partner on the international stage.

The high degree of vertical integration in our in-house production calls for the highest possible qualifications from our specialist teams. To achieve this, we offer our employees an extensive program of training courses and further training seminars. This way we can not only update the specialist know-how needed in each area but also add greater depth and breadth.
